Net@Work Named to Crain's Top NY Software Companies Listing For Fifth Consecutive Year

Net@Work Jumps From #22 Last Year to #14 This Year; Company Cited as Among the Year's Top 5 Biggest Gainers

New York, NY (January 24, 2008) - For a fifth consecutive year, Net@Work has been recognized by Crain's New York Business Magazine in their annual ranking of New York's 25 Largest Software Companies. Net@Work jumped eight spots from the previous year, going from #22 in 2006 to #14 in 2007. The ranking reflects Net@Work's exponential growth, as the company expanded its core service offerings organically and via several strategic acquisitions.

Since its inception, Net@Work has built a reputation for its breadth of customized, real-world solutions and its responsive support. The Crain's listing underscores the company's steady growth and its emergence as the NY metropolitan area's leading choice for the implementation of business management software. The Crain's listing punctuated a year of several other notable distinctions: Net@Work was listed on the first-ever Inc. 5,000, which recognizes the fastest-growing private companies in the country, earned a place on the Computer Reseller News' list of 2007 Fast-Growth 100 Solution Providers, and ranked #12 in Accounting Technology's 2007 VAR 100 List of Largest Accounting Software Consulting Firms.

"Our recipe for success is and has always been pretty simple: listen to each client, understand their needs, deliver business solutions that deliver bottom-line results, and provide both ongoing consultation and unstinting support," said Net@Work co-founder Alex Solomon. "The Crain's listing recognizes the commitment and talent of the Net@Work team, from our developers and business consultants to our back-office staff, all of whom make sure each client is given the attention and business solutions needed to succeed."
